

LIST OF FIGURES

Figure 2-1	World's energy demand and primary energy composition	6
Figure 2-2	World's power generation and power generation composition	7
Figure 2-3	Estimate of coal-fired power plant in the ERIA	8
Figure 2-4	Origin of primary energy import in EAS region	9
Figure 2-5	Self-sufficiency of energy resources in the EAS region	10
Figure 2-6	Proved reserves of coal by rank in the world	11
Figure 2-7	Recoverable coal reserves in the world (by region and coal rank)	12
Figure 2-8	Coal consumption by coal type in Asia	13
Figure 2-9	Flow of steam coal (2011 estimate)	15
Figure 2-10	Steam coal demand forecast in Asia	17
Figure 2-11	Coal type and average calorific value used in coal-fired power plant in Korea	19
Figure 2-12	Comparison of coal and natural gas prices	21
Figure 2-13	US LNG import to Japan cost breakdown	22
Figure 2-14	Natural gas price mechanisms	23
Figure 2-15	Thermal efficiency of coal-fired power stations in Asia, Germany and the US	24
Figure 3-1	Minimization of capital outflow	27
Figure 3-2	Emission of Isogo coal-fired power plant in Japan	29
Figure 3-3	CO ₂ emission per thermal unit	31
Figure 3-4	Relationship between power plant efficiency and CO ₂ emission	31
Figure 3-5	CO ₂ emission in power generating fuel	32
Figure 3-6	Average efficiency of coal-fired power plant in China	33
Figure 3-7	Change in steam condition of coal-fired power plant in Korea	34
Figure 3-8	CO ₂ emission and reduction estimates in coal-fired power plant	35
Figure 3-9	Investment and development benefits	37
Figure 3-10	Job creation benefits	39
Figure 4-1	Coal import dependency	43
Figure 4-2	Countries' status and required policy levels	43
Figure 4-3	Image of the technological potential map	44
Figure 4-4	Generation cost compared with fuel purchase costs	46
Figure 5-1	Thermal efficiency history and roadmap	48
Figure 5-2	CCT case benefits	49
Figure 5-3	Comparison of SO _x and NO _x emission standards from coal-fired power stations	50
