Chapter 2.

- [1] BP Statistical Review (2009)
- [2] At a company level, national oil companies hold 76% of reserves, while the Russian oil companies hold 17% of the reserves. An area of improvement is in major International Oil Companies (IOC), which have access to advanced technology and funds but the amount of accessible reserves they hold is only 7%.
- [3] In the IEA World Energy Outlook, it is predicted that the OPEC countries supply the majority of world petroleum increase in the future, and the OPEC share will increase from 44% in 2007 to 51% in 2030.
