

ACKNOWLEDGEMENT

This report contains the outcome of the research activity of ERIA Working Group on “Sustainability Assessment of Biomass Utilisation in East Asia” of fiscal year 2009, sponsored by the Economic Research Institute for ASEAN and East Asia (ERIA).

We are grateful to the Energy Ministers and Energy Cooperation Task Force (ECTF) in East Asian Summit (EAS) countries for taking up the initiative on “Biofuels for Transport and Other Purposes”. Our research was requested by the Energy Ministers in order to test the guideline to assess “Sustainability of Biomass Utilisation in East Asia”, which was published in July 2009, and to do pilot projects in EAS countries.

We sincerely acknowledge the help and cooperation of various stakeholders, including local people, farmers and workers, private companies and local research team members with whom we interacted during the field visits for pilot case studies in India, Indonesia, the Philippines and Thailand. We had a great experience during these visits and very fruitful discussions with all of them.

Finally, we wish to thank ERIA and its officers for providing financial support for the studies and generous assistance in arranging logistics for various activities of the project.

Tomoko KONISHI and Yuki KUDOH

On behalf of the Working Group
