

LIST OF FIGURES

Figure 2-1	Passenger vehicles per 1,000 populations – comparison between cities	8
Figure 2-2	Comparisons of gasoline consumption per 1,000 populations in Asian cities	11
Figure 2-3	Comparisons of gasoline consumption per 1,000 populations normalized by per capita Gross Regional Product in Asian cities	11
Figure 2-4	Average speed and road length per passenger vehicle	13
Figure 3-1	Annualized vehicle ownership cost by city	19
Figure 3-2	Daily cost of passenger vehicle use and urban mass transits in US dollars	24
Figure 4-1	Map of JABODETABEK region	30
Figure 4-2	The Image of urban sprawl development in Jakarta region	31
Figure 4-3	The population growth of JABODETABEK (1970-2010)	33
Figure 4-4	The population density of JABODETABEK (2010)	34
Figure 4-5	The economics growth of DKI Jakarta during 2000-2012 (%)	35
Figure 4-6	The progress of regional GDP/capita of DKI Jakarta amongst other Provinces in Java Island during 2004-2009	36
Figure 4-7	The change of number of private cars owned by households (2002 and 2010)	38
Figure 4-8	The change of transportation mode commuting in Jakarta (2002 and 2010)	38
Figure 4-9	The change in number of Commuters to DKI Jakarta	39
Figure 4-10	The predicted V/C ratio in JABODETABEK area in 2020 (do-nothing situation)	40
Figure 4-11	The morning peak travel time and speed in Pasar Minggu-Manggarai segment and Cilandak-Monas segment	41
Figure 4-12	Factors causing the congestion in JABODETABEK area	42
Figure 4-13	A schematic Diagram of Jakarta Transport Model	45
Figure 4-14	The supply chain of energy and its relationship with transport development	46

Figure 4-15	Travel speed mode comparison to find the congestion spot in a commuter corridor	53
Figure 4-16	Kuningan area, Jakarta	53
Figure 4-17	Development Plan for Kuningan area 2030 (Draft), Jakarta	55
Figure 5-1	Flow of the simulation analysis	58
Figure 5-2	Target area for simulation analysis	58
Figure 5-3	Illustration of the road structure	59
Figure 5-4	Understanding of traffic congestion	60
Figure 5-5	Types of improvement of road infrastructure	60
Figure 5-6	Model of road network	63
Figure 5-7	Input of OD data	64
Figure 5-8	Candidates for construction	66
Figure 5-9	Calculation flow to select optimal improvement plan	67
Figure 5-10	Interference model at lane change point	68
Figure 5-11	Reduction of total trip time	69
Figure 5-12	Optimization results	70
Figure 5-13	Example of emission table	71
Figure 5-14	Microscopic traffic simulation	72
Figure 5-15	Time variation of gasoline consumption	73
Figure 5-16	Gasoline consumption	74
Figure 5-17	Road network with an under/overpass	76
Figure 5-18	Design of under/overpass	76
Figure 5-19	Traffic flows before and after improvement	77
Figure 5-20	Gasoline consumption	78
Figure 5-21	Estimated annual fuel consumption	79
