

Acknowledgements

This report consists of all research papers from *ERIA Microdata Research Project of Fiscal Year 2010*. The project is part of the broader ERIA's research pillar on *Deepening Economic Integration*. It addresses the theme of globalization and innovation, with "**Globalization and Innovation in East Asia**" as the title of the project and of this report. As indicated in the first chapter of this report, understanding the process and determinants of innovation is unarguably a research and policy issue of vast importance. Innovation is important for sustaining a country's competitiveness in a more globalized environment. All of the papers presented in three workshops over the period of September 2010 to February 2011.

We incurred debts of gratitude to all members of the Project's working group who have actively contributed to the outcome of the research. We would like to also express our sincere appreciation for the time willingly surrendered by all members to actively communicate with ERIA and to participate in the three Project's long workshops held in Jakarta, Bali, and Bangkok over the course of the project.

Dr. Hahn and Dr. Narjoko owe a great intellectual debt to Professor Shujiro Urata who provided excellent guidance throughout the course of the project. Professor Urata has always been active in engaging in the research, from the very beginning at the preparation stage, during the discussion of research papers in all three workshops, and at the finalization step of the project.

We express our special thanks to Professor Fukunari Kimura, Chief Economist of ERIA, for his encouragement and support for the project. Professor Kimura has always been, and is still, one of the great supporters of ERIA Microdata Project. His idea of inventing the unique ERIA's Microdata research group is proven to be one of his significant contributions, not only for the ERIA core economic research but also for the academic literature and community in general.

We are greatly indebted to Mr. Hidetoshi Nishimura, Mr. Daiki Kasugahara, Mr. Mitsuo Matsumoto, and Mr. Takeo Tsukuda, who have continuously and strongly supported both the idea and the implementation of Microdata project. A successful output delivery of the Microdata Project this fiscal year would not have been possible without support from ERIA management.

We are indeed grateful for the all reliable supporting staffs of ERIA, in particular Maryclara Pondaag, Noviawaty, and Robertus Herdiyanto, for their tireless efforts to help ensuring a successful delivery of the project. Last but not least, our sincere appreciation to our colleagues, ERIA researchers, for their enthusiasms in the research works of the project.

Chin Hee Hahn
